Designing *cloud-native IoT platforms* — from device networks to multi-tenant software.

IoT architect with a decade of experience across industrial, automotive, healthcare and residential connected systems. My focus is the cloud and platform layer: data pipelines, MQTT fleets, LoRaWAN networks, multi-site architectures and the full-stack software that sits on top of them. I also handle the networking side (Tailscale mesh, VLAN design, firewalls, edge gateways) and the electrical / energy layer on the ground — panels, wiring, solar / EV / PVPC optimization — so the stack holds together end-to-end.

Currently Senior IoT Architect in pharma / life sciences (LoRaWAN, MQTT fleets, AWS data platform), previously Cloud FAE at Proemion and Front-End Team Lead at Wise (AXA security tooling). Alongside, co-founder of **Civitech**, a smart-home and energy-optimization venture built on Home Assistant, Shelly and custom automations.

PROJECTS SHIPPED

CURRENTLY

TWO ROLES · ACTIVE

SENIOR IOT ARCHITECT

Pharma / Life Sciences

Consulting · Dec 2025 — Present

IoT architecture and data pipelines across manufacturing and R&D sites. LoRaWAN + Tektelic NS, MQTT fleet (Mosquitto / Cedalo MMC), AWS data platform, onboarding playbooks and governance.

LoRaWAN

Tektelic

MQTT

AWS

FOUNDER · CEO

Civitech

Smart home & energy optimization · 2021 — Present

Productized installation service for residential and B2B clients on Home Assistant + Shelly. Owns the full stack: HA dashboards, monitoring, installation SOPs, remote fleet management and pricing strategy.

Home Assistant

Shelly

Grafana

MQTT

EXPERIENCE

5 ROLES

Senior IoT Architect

CURRENT

Pharma / Life Sciences sector

Dec 2025 – Present

- IoT architecture and data pipelines across manufacturing and R&D sites
- LoRaWAN networks with Tektelic Network Server, MQTT fleet (Mosquitto / Cedalo MMC), AWS data platform
- Platform integrations, onboarding playbooks and governance for industrial use-cases

Cloud Field Application Engineer

CURRENT

Proemion · Industrial IoT & Fleet Telematics

Jun 2023 – Present

- Primary technical liaison for IoT vehicle and fleet-management solutions, ensuring tailored integrations for OEM clients
- Configured and implemented Proemion DataPortal for client data visualization and cloud features
- Dedicated technical support, resolving integration challenges end-to-end
- Stack: AWS, MQTT, Python, TypeScript

Co-founder & CEO

CURRENT

Civitech · Smart Home & Energy Optimization

2021 – Present

- Founded and scaled a smart-home installation and energy-optimization company serving residential and B2B clients (laundries, offices, energy-intensive businesses)
- Designed a productized service line on Home Assistant + Shelly (Shelly Direct and Civitech Smart tiers) covering lighting, blinds, heating, AC, security and solar / PVPC-based automations
- Built the full technical stack: HA dashboards, generic package architecture, installation SOPs, monitoring (Grafana + InfluxDB + MQTT) and remote fleet management
- Ownership of sales pipeline, pricing strategy, partnerships and technical delivery

Front-End Team Lead

Wise · AXA security tooling

Nov 2019 – Jan 2024

- Led the front-end team for a penetration-testing security platform built with Python (Flask) and .NET Core
- Responsive UIs in React.js; backend in Node.js + TypeScript, GraphQL and blockchain smart contracts
- CI/CD with Azure and GitHub Actions; mobile companion app in Flutter / Dart

IoT Engineer

Electrans · Railway sector

Jan 2018 – Nov 2019

- Desktop UIs in C# for railway operations
- Transitioned to IoT: data acquisition at train stations via Raspberry Pi (cellular), transmitted to central server
- Python and .NET for solution development; collaborative web platforms in JavaScript
- Grafana + InfluxDB + Telegraf + Mosquitto stack for monitoring and storage

Fleet Monitor

B2B IoT SaaS · Django + Next.js

B2B monitoring platform for IoT installations: multi-site fleet, kWh anomaly detection, activity timeline, alert routing, public customer portals with scoped tokens, audit logs. 300+ tests, Fernet-encrypted tokens.

Smart-home platform architecture

Home Assistant package architecture

Generic, reusable architecture for smart-home installations: package factory for lighting / blinds / HVAC / energy, dashboard generator, CI validation, per-client repos cloned from a master template. Deployed across multiple residential and B2B sites.

OpenClaw

AI agent orchestration · 2026

Self-hosted platform replacing earlier agent stack: 25 scheduled agents, 13 cron jobs, Mission Control UI, plugins for Holded, n8n, Firecrawl, GitHub, HA, MQTT, Grafana, InfluxDB. Deployed on Proxmox LXC.

Kalipso

Personal finance & health app · Expo + RN Web

Multi-tenant personal dashboard: PSD2 banking ingestion via GoCardless, LLM transaction categorizer, net-worth tracking, real-estate analyzer, Fitbit OAuth integration. Hardened with PBKDF2 + JWT + rate limiting. Private deployment.

Pharma IoT fleet toolkit

Life sciences consulting · Python

Fleet upgrade and monitoring tooling for LoRaWAN gateways (parallel SFTP, 10-phase upgrade pipeline, auto-recovery). MQTT + Palo Alto firewall integration design across manufacturing sites. Internal Confluence documentation.

Home-lab & SIEM

Self-hosted infrastructure · Proxmox

10+ LXC containers running Grafana, InfluxDB, n8n, Vaultwarden, Mosquitto, Ollama. Wazuh SIEM + Loki + CrowdSec for security monitoring. Tailscale mesh, Cloudflare Tunnel, mTLS, hardened SSH and firewall rules.

Delta Dore cloud integration

Home Assistant reverse-engineering

Reverse-engineered OAuth2 + WebSocket protocol of a closed manufacturer cloud API. Live bidirectional control from HA (no vendor hub needed). Documented for internal smart-home deployments.

Boat tracking platform

Runsolutions · Palma · 2023

TTN LoRaWAN integration for water / electric meters and presence sensors. MQTT decoding, TypeScript parsers, Telegraf + InfluxDB + Grafana dashboards.

BLE medical gateway

Imaginae · Barcelona · 2023-24

Raspberry Pi gateway connecting BLE medical devices to the Biot platform. DDD architecture, BLE scanning, secure data transfer.

Healthcare integrations

Blendarsys · Barcelona · 2023

IoT device integration via Mirth Connect and hospital APIs. Secure data exchange between heterogeneous healthcare systems.

Fleet tracking platform

BWireless · Barcelona · 2018-19

Real-time vehicle tracking platform with GPS, Python and HTML5. Customer-facing map UI with live telemetry.

dApps & smart contracts

Freelance · 2020-22

Solidity + React.js decentralized applications. IoT project management across LoRaWAN initiatives. Earlier firmware work on ESP32 / Raspberry Pi available on request.

EDUCATION

FORMAL

2017 – 2018

Master's Degree in Internet of Things · UPC Barcelona

2012 – 2017

BSc Electronic, Industrial & Automatic Engineering · UIB Palma

2023 – 2024

Master in AI and Innovation

Founderz & Microsoft

2023

AZ-220 Microsoft Azure IoT Developer

Microsoft

2023
